

WC-CD-80

Wovenpanel® Curtain

The WC-CD-80 system stands out for its aesthetic and functional design, as it is completely foldable and extendable. It is composed of a profiled galvanized steel guide, which incorporates interior mobile carriages. The connection between the mesh and the guide is achieved by connecting the carriages with stainless steel U-profiles, which are screwed to the mesh. In addition, the guide can be powder coated or curved according to the requirements of the project. Includes the guide, carriages and U-profiles.
