Merrow, Brass

Merrow is a beautifully textured architectural wire mesh that combines the elegance of a distinctive weave with the durability of brass. Using Banker's exclusive embossed technology, this pattern offers a rich tactile appeal that adds depth and dimension to any design. Its subtle texture creates a sophisticated and refined look, perfect for both decorative and functional applications. Woven from high-quality brass, Merrow is ideal for a variety of design environments, from contemporary residential interiors to high-end commercial spaces. Whether used in panels, screens, or custom joinery features, its textured design elevates the overall aesthetic of your project. In addition to brass, Merrow can be woven in a wide range of metal alloys, allowing designers to tailor it to their specific vision. Secondary finishes like antique plating further enhance the texture, offering even more customization for your next project.

Specifications

Wovenpanel Mesh Finish Family	
Wovenpanel Mesh Finish	
Wovenpanel Mesh Finishing Type
